Dear Hiring Manager,

I'm excited to apply for the AI Developer position at Software International. With a strong background in software engineering and AI development, I thrive on pushing the boundaries of technology. At Amazon, I led a team that built advanced serverless data pipelines, enhancing efficiency by 50%. This experience honed my ability to blend engineering rigor with creative problem-solving, which is exactly what this role demands.

In my previous positions, I've tackled high-risk projects where I was able to develop multi-agent systems and AI-driven automation tools. For instance, I architected NLP chatbots that not only secured contracts but positioned my team as leaders in the AI/ML space. My work on the FoodFlow Intelligence Platform involved integrating various AI tools for analytics, which aligns perfectly with your need for innovative prototyping.

I'm ready to bring my hands-on experience with rapid experimentation and my passion for exploring unconventional ideas to your team. I believe that my curiosity-driven mindset and proven ability to pivot quickly will contribute to a culture of experimentation at Software International. I look forward to the possibility of collaborating with you to create transformative AI solutions.

Sincerely,
Aviral Garg
